Workshop on Global Education and the Technological Frontier V:

Conducted by Prof. Winfried K. Rudloff, Governors State Univ., Univ. Pk., IL, USA

This workshop will focus on creating and working with Interactive Web Applications of learning material. It will discuss recent technological advances as they are applicable to Internet-based global and international education, and its influence on the people of the world at large. It will demonstrate how to create web application “on the fly” without specific knowledge of html, xhtml, and/or Java. It will explore Internet-based communication tools as aids in global education.

Coffee Break 15:30 – 15:50

Workshop on Human Creativity in the Arts & Sciences in the High-Tech Era

Conducted by Prof. Winfried K. Rudloff, Governors State Univ., Univ. Pk., IL, USA

Our technological age has, on one hand, enrich our lives with instant gratification through the electronic media, yet, on the other, has impoverish us and estranged us from active creativity in the performing and visual arts.

This workshop will critically investigate human creativity and intuition, and will examine how they can enrich our lives through active participation in music, and in visual and performing arts. This workshop is designed to stimulate the development of concepts, which go beyond our ordinary way of thinking that is often stifled by our emotions and social restrictions.
